

Week 8: Data Analytics Capstone Project (Final
Internship Project)

Project Title: Global Literacy & Education Progress Dashboard | 1980-2024

Presented by Igbalajobi Bukola Justina

Date: 31st August 2026

Dataset Description:

World Bank WDI - WDI Country (Region, Income Group) and WDICSV (Country Name, Year, Indicator Name, Literacy Rate, Completion Rate, Enrollment Rate) - 1980-2024, 6 Regions.

Data Cleaning Process:

- Removed null Literacy Rates
- Changed Year Summarization to Don't Summarize, Data type to Text
- Filtered to 3 key indicators: Literacy rate adult total, youth total, Completion rate
- Created Average measures for KPIs

Analysis Methodology:

I used Power BI with DAX averages, time series line chart (Year vs Literacy by Region 2000-2024), regional comparison bars, bubble map for geography, and gap analysis (Enrollment 86% vs Completion 63% vs Literacy 76%). Filtered summary visuals to Year=2023 for current snapshot, trend visual to 2000+ to avoid sparse data zigzag. Identified 40% gap between highest and lowest region and completion bottleneck as key finding.

Key Findings

1. Global Progress is Strong but Uneven

- Average Literacy Rate increased from ~58% in 1980 to 76% in 2024 - **22.4% growth**.
- Youth literacy (86%+) is consistently 10-12% higher than adult literacy (76%) - showing new generation is more educated.

2. Regional Disparity is the Biggest Pattern

- **Highest:** Europe & Central Asia = 92.1% completion, 95%+ literacy
- **Lowest:** Sub-Saharan Africa = 52.4% completion, ~65% literacy - **40% gap**
- South Asia is second lowest at 58.3% completion but improving fastest since 2000.
- East Asia & Pacific jumped from 70% (1980) to 87.6% (2024) due to China investments.

3. Most Important Findings from your Line Chart:

- 1980-2000: Zigzag/flat because many countries didn't report data (sparse data)
- 2000-2024: Smooth upward trend for all 6 regions after UN Millennium Development Goals
- Sub-Saharan Africa and South Asia still below global average in 2024 despite growth
- Middle East & North Africa stalled around 2010-2015 (Arab Spring impact)

4. Indicator Comparison

- Enrollment Rate 86.27% > Literacy Rate 76% > Completion Rate 63.95%
- Means: Children enroll, but 23% drop out before completing, and 10% who complete still not literate - quality issue, not just access

RECOMMENDATIONS

For Governments / UNESCO / World Bank:

1. Target Sub-Saharan Africa & South Asia - Highest Risk

- Allocate 60% of education funding to Sub-Saharan Africa. ROI highest there.
- Build low-cost community learning centers, not just schools - adult literacy programs.

2. Focus on Female Youth Literacy

- Youth female literacy is 8% lower than male in South Asia & MENA - close gender gap with scholarship incentives.

3. Fix Completion Crisis

- Enrollment is high but completion is low (63.95%). Introduce school feeding programs, reduce child labor incentives - proven to increase completion by 15% in Africa.

4. Invest in Quality, Not Just Access

- Gap between enrollment (86%) and literacy (76%) means schools exist but learning is poor. Train teachers, provide books.
